About Jayhawk Pipeline, LLC

Formed in 1957, Jayhawk Pipeline is 100% owned by CHS Inc. based out of McPherson, Kansas. Jayhawk currently transports approximately 140,000 barrels per day of crude oil in both intrastate and interstate commerce, and is connected to all the major crude oil pipelines in Kansas. Jayhawk has over 70 employees who operate over 1,000 miles of regulated pipeline throughout Kansas, Nebraska, Oklahoma and Texas and is the operator of Kaw Pipe Line Company and the Hooker-Clawson Pipeline.

COMMITMENT TO SAFETY, HEALTH & ENVIRONMENT

Jayhawk Pipeline's highest priority is the transportation of crude oil in a reliable, safe and environmentally friendly manner. Jayhawk is dedicated to these goals and follows all applicable pipeline rules and regulations. Ensuring the mechanical integrity of its pipeline system is an important ingredient toward accomplishing those goals. To this end, Jayhawk has created and implemented a comprehensive pipeline Integrity Management Plan (IMP), Damage Prevention Plan (DP), Spill Response Plan (SRP), and Public Awareness Program (PAP). Through these efforts, the operator will enhance public safety, further protect the environment, and reduce the risk of third-party damage to the pipeline system. The company and its management provide the needed support, resources, and funding required to accomplish these goals. For additional information, contact Jayhawk Pipeline, L.L.C.

Product	Description	Counties Involved:
Petroleum Crude Oil ERG #128 Protective Clothing: Wear positive pressure self-contained breathing apparatus. Structural firefighters' protective clothing will only provide limited protection.	LEAK INDICATORS: Dark brown spots on the ground, dead vegetation or an oily sheen on top of the ground or floating on the surface of a body of water may indicate the presence of a leak in a crude oil pipeline system.	Beaver Texas CALL PIPELINE COMPANY Emergency Response Number: 1-888-542-9575
	HAZARDS: HIGHLY FLAMMABLE: Will be easily ignited by heat sparks or flames. Vapors may form explosive mixtures with air. Vapors may travel to source of ignition and flash back. Most vapors are heavier than air. They will spread along ground and collect in low or confined areas (sewers, basements, tanks). Vapor explosion hazard indoors, outdoors or in sewers. Those substances designated with a (P) may polymerize explosively when heated or involved in a fire. Runoff to sewer may create fire or explosion hazard. Containers may explode when heated. Many liquids are lighter than water.	
	HEALTH: Inhalation or contact with material may irritate or burn skin and eyes. Fire may produce irritating, corrosive and/or toxic gases. Vapors may cause dizziness or suffocation. Runoff	
	SPILL OR LEAK RESPONSE: ELIMINATE all ignition sources (no smoking, flares, sparks or flames in immediate area). All equipment used when handling the product must be grounded. Do not touch or walk through spilled material. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. A vapor suppressing foam may be used to reduce vapors

Resources & Training Materials:

Pipelines are the safest and most reliable way to transport natural gas, crude oil, gasoline, propane, ethanol and other energy and chemical products. However, if an emergency occurs near or involving a pipeline, it is critical that response agencies in your community know how to respond and are prepared to work together with pipeline operator representatives. NENA Pipeline Emergency Operations Standard/Model Recommendation Document 56-007:

PUBLIC SAFETY---CALL PIPELINE COMPANY EMERGENCY NUMBER: 1-888-542-9575

EVACUATION: As an immediate precautionary measure, isolate spill or leak area for at least 50 meters (150 feet) in all directions. Keep unauthorized personnel away. Stay upwind. Keep out of low areas. Ventilate closed spaces before entering.

LARGE SPILL: Consider initial downwind evacuation for at least 300 meters (1000 feet).

FIRE: If tank, rail car or tank truck is involved in a fire, ISOLATE for 800 meters (1/2 mile) in all directions; also, consider initial evacuation for 800 meters (1/2 mile) in all directions.

FIRST AID: Move victim to fresh air, call or provide medical services.

Locations of our lines: Access transmission pipeline maps and emergency contact information and download maps to include in your mapping programs. This tool is provided and maintained by the Department of Transportation.
